

UTILITY BUSINESS ANALYSIS

Pre-AMR Considerations

Rate and Billing Analysis

Communicating The Truth

In many communities today, the rate structure does not allow appropriate levels of ongoing infrastructure rebuilding. In cases where new debt is being used to finance an AMR project, it is often helpful to get an independent review of rates and revenue that can be used to build public awareness and support.

Asset Utilization Review

Water Example

Water assets may include production plants, transfer pumps, storage facilities, and distribution piping. How are these assets being utilized? Do you have spare capacity that could be sold? Can you effectively measure loss? These are a few of the many issues that are explored in this “big picture” business review that is connected to the AMR benefit equation.

Asset Capitalization and Maintenance

Asset Rebuilding

What is the appropriate capital investment (each and every year) to ensure that the value of the asset remains stable or grows according to the public need? How can AMR and other utility data be used to highlight system failures and weaknesses? Can this data be used to identify and fix problems before require crisis spending is required? These topics are evaluated and reviewed to assist utility clients in making informed decisions and managing change.

About the Company

Utiliworks Consulting, LLC

UtiliWorks Consulting is a professional services company focused on the successful development and deployment of AMR technologies into the marketplace. Our goal is to provide simple, accurate and reliable delivery of metered data to help utilities better manage their business.
